

A Stela of Iwrkhy from his tomb in Saqqara

"لوحة من مقبرة ايورخي بسقارة"

Tarek Sayed Tawfik

Associate Professor, Faculty of Archaeology, Cairo University

tarektawfik71@yahoo.com

Abstract

Excavations in the New Kingdom tomb of the general of the army Iwrkhy in Saqqara revealed a displaced round-topped stela. The well-preserved large limestone stela dedicated to Re-Horakhty and Maat daughter of Re is missing its lower part. The inscriptions on the stela confirm previous assumptions about the genealogy of Iwrkhy. The lower part of a stela still *in situ* in the tomb can help reconstruct the missing lower part of the stela.

Keywords: Saqqara, stela, New Kingdom, Iwrkhy, Hatiay, Yupa, genealogy

الملخص

أسفرت الحفائر في مقبرة قائد الجيش ايورخي التي تؤرخ بالدولة الحديثة عن اكتشاف لوحة أعلاها مقوس منقولة من مكانها الأصلي. اللوحة كبيرة الحجم من الحجر الجيري مكرسة للمعبودات رع حورأختي وماعت سات رع وينقص من اللوحة جزئها الأسفل؛ وتؤكد نصوص اللوحة على سلسلة النسب المقترحة سابقاً لعائلة ايورخي. وهناك جزء سفلي من لوحة لا يزال في موقعه الأصلي في المقبرة يمكن أن يساعد في تصور الجزء الناقص من اللوحة.

الكلمات الدالة: سقارة، لوحة، الدولة الحديثة، ايورخي، حاتياي، يوبا، سلسلة النسب.

1. Introduction

During the seasons 2017/2018, the mission of the Faculty of Archaeology Cairo University excavating in Saqqara headed by Ola El Aguizy uncovered the tomb of the General of the army Iwrkhy¹ also written Urkhiya (004/USC).² The name of this general was previously already known from inscriptions dating to the reigns of Sethy I and Ramesses II.³ Titles that have been attested for Iwrkhy have been collected by Herzberg-Beiersdorf.⁴

Since 1984 the Faculty of Archaeology Cairo University has been excavating the New Kingdom Necropolis of high officials in an area south of the causeway of the

Pyramid of King Unas.⁵ The free standing temple-tomb⁶ is located to the west of the Old Kingdom Mastaba of Mennefer. Like most of the New Kingdom tombs on the site it follows an east-west axis. It is built with mud brick lined with limestone. Its plan consists of a forecourt, a statue room with lateral vaulted storerooms, a peristyle court with a burial shaft in its middle and finally to the west the tripartite sanctuary. Behind the central chapel is half of a mud brick pyramid that continued on the roof of the chapel and was topped with a pyramidion. The pyramidion was found later in the debris filling the burial shaft during season (2019-2020).

2. Discovery of the stela

Resuming the excavation in season (2021-2022) the originally vaulted storeroom on the northern side of the tomb opening towards the peristyle court was being cleared of mainly clean windblown sand. Surprisingly on the 20th of January 2022 the upper part of a round-topped stela started appearing seemingly fixed to the east rear wall of the room (figs. 1&2). After removing all the sand it turned out that the stela apparently was removed from its original location in the tomb and just set against the wall in this room. The stela was in no way attached by plaster to the mud brick wall or the floor. It seems that for an unknown reason someone wanted to keep this stela there temporarily, possibly looters who were not able to come back for it.

3. Description of the stela

3.1. Material, dimensions and shape

Material: limestone

Remains of color: minimal remains of a thin layer of plaster with color on it show that the stela used to be colored. Some plaster with blue paint on it is still visible from the bracelet on the wrist of Iwrkhy in the central register (fig. 3) Faint red color is still preserved in the lines dividing the columns of hieroglyphic text on the left side of the central register (fig. 4)

Fig. 4 Remains of blue paint from the bracelet on the wrist of Iwrkhy.
Photo by the author.

Fig. 3 Red color in the lines dividing the columns of hieroglyphic text.
Photo by the author.

Dimensions: height: 1.31 m, width: 1.04 m, depth: 20 cm

The stela is round-topped and has an incised line framing the entire decoration. The monument is in a good condition apart of missing its lower part, that could be estimated at around 83 cm, in comparison to the lower part of a stela of Iwrkhy still *in situ* in the same tomb, which will be discussed later in detail. The backside was left rough and showed remains of mud plaster indicating that it was fixed to a mud brick wall. On the sides remains of gypsum plaster are preserved suggesting that the stela was in position between reliefs on the one side and a door jamb on the other.

3.2. Scenes

3.2.1. The lunette

In the lunette Iwrkhy is seen facing right, arms raised in adoration of the seated Re-Horakhty followed by a standing Maat. There is an offering stand between Iwrkhy and Re-Horakhty with a lotus flower attached to it and a  *nmst* vessel on top. Probably the offering stand was raised from the ground line as there was not enough space between the feet of Iwrkhy and the base of the throne of Re-Horakhty. The falcon-headed god holds a  *w3s*-scepter in his right hand and a  *nh* sign in his left

hand directed towards Iwrkhy. There is a sun disc on the falcons head not directly attached to it. A protective cobra partly surrounds the sun disc. Maat daughter of Re is shown as a female deity with the feather on her head. This feather interrupts the framing line and rises a little above it. She holds an $\text{𓆎} \text{nh}$ sign in her left hand and raises the right hand towards the back of Re-Horakhty. Behind Maat is a large $\text{𓆎} \text{imntt}$ sign symbolizing the west, the realm of the dead.

A double line separates the lunette from the central register. Unusual is a deliberate incision connecting the two lines behind the feet of Iwrkhy which seems to turn this double line into a base joining Iwrkhy with Re-Horakhty and Maat. This in a way elevating him from just adoring them to joining them on a common base different than the normal ground that continues behind the incision.

3.2.2. The central register

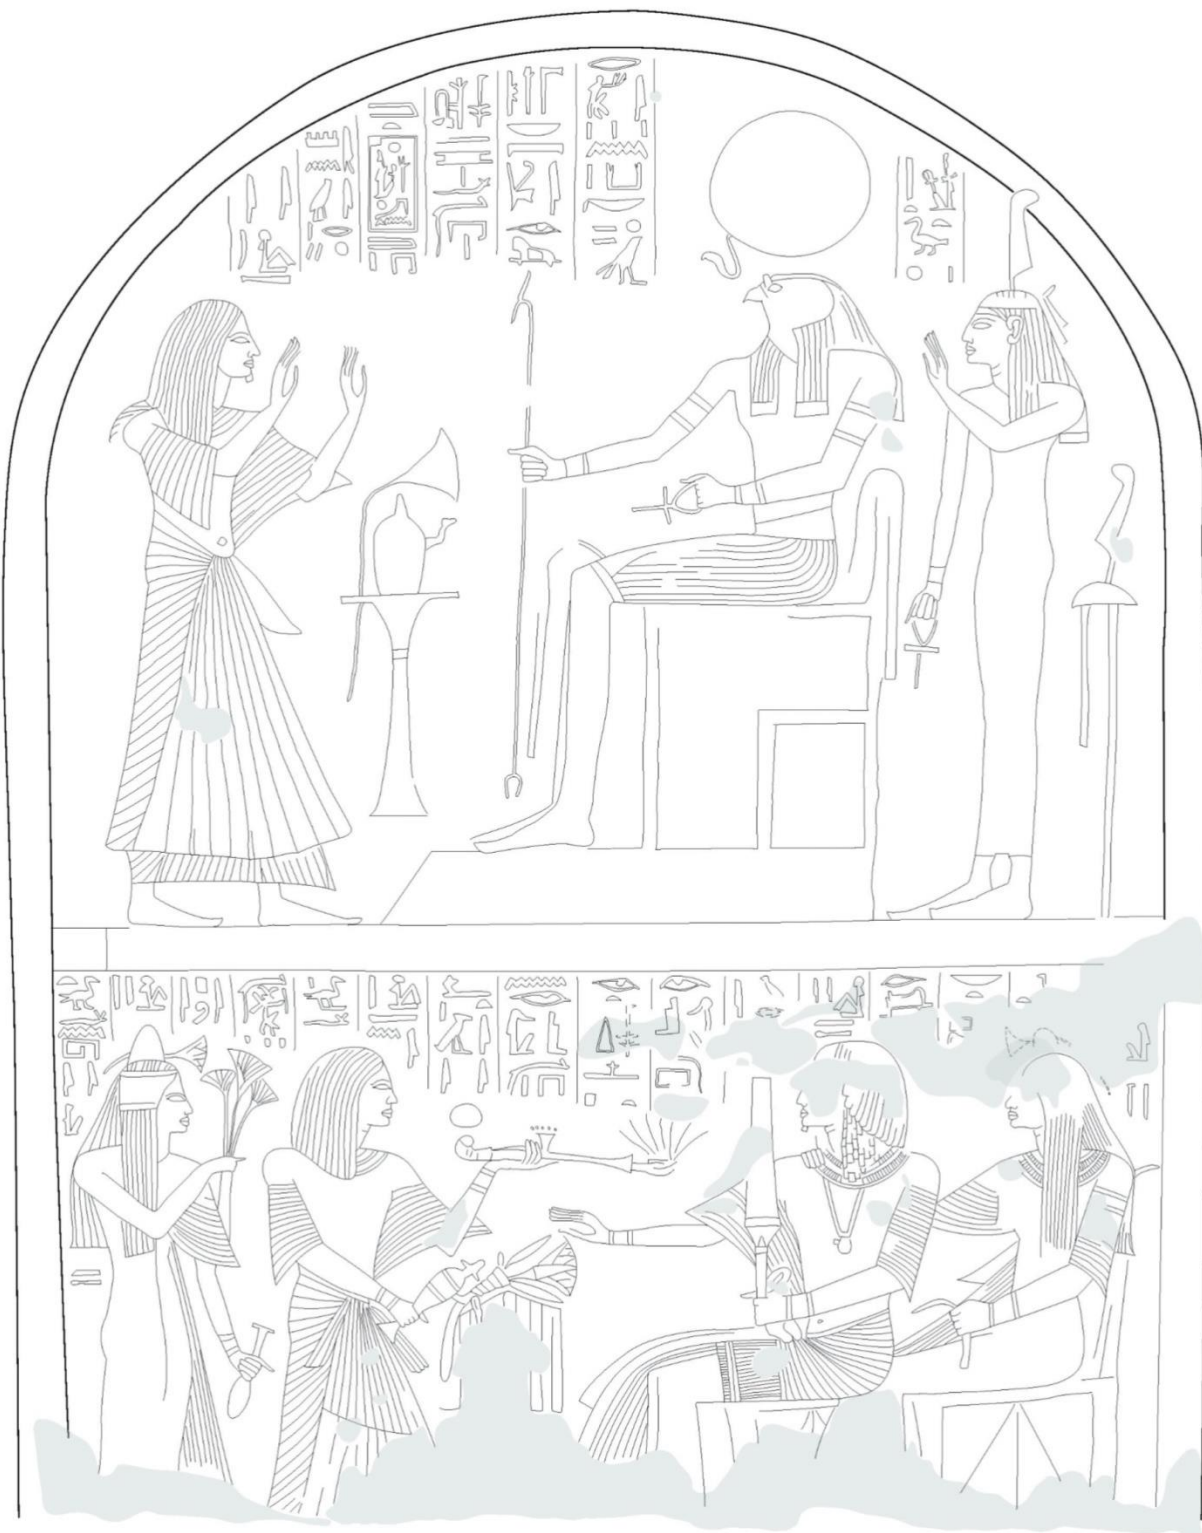

In the central register Iwrkhy and his wife are depicted sitting on chairs at an offering table while their children Yupa and Nehy are burning incense and presenting them offerings. Iwrkhy stretches his right hand towards the offering table on which there are stylized loafs of bread topped with a bouquet of papyrus flowers and blossoms. In his left hand Iwrkhy holds a $\text{𓆎} \text{shm}$ scepter and around his neck he wears a heart amulet of justification.⁷ His wife, probably Touy (the last part of her name is missing), is lovingly grasping the shoulder of her husband with her right hand and she holds a lotus blossom in her left hand. On her head she wears a head cone with an open papyrus flower. Although the first two material examples of head cones made out of biological wax have been discovered in the South and North Cemeteries of Akhetaten it is still unclear if they were worn only by the dead or also by the living and what their exact function was.⁸ Yupa holds in his left hand an ignited incense burner directed towards the faces of his parents and in his right hand he holds a $\text{𓆎} \text{hs}$ -vessel. The daughter Nehy also wears a cone with an open lotus flower on her head. In her left hand she holds a slender vessel with a long neck while she raises her right hand with a bouquet of three open lotus flowers.

conducting various activities associated with the royal estate management. The scenes of agriculture and overseeing the harvesting and storing of the crops of the royal estates were repeatedly depicted in the tombs of High Stewards.¹⁰

Al-Ayedi, gives a slightly different translation of the title: “Steward of the funerary temple of *Wsr -m3t-R-stp.n-R* in Amun’s temple”.¹¹

The royal estate referred to here as *t3 hwt Wsr -m3t-R-stp.n-R m pr Imn* is the name of the Ramesseum, the House of millions of years of Ramses II in Thebes.¹²

Other attestations for this title are:

-Ipwi/Yupa the son of Iwrkhy is depicted bearing the same title as his father on a stela of the Troop Commander Pahemeter from Sedment.¹³

- On a statue of the High Steward of the Ramesseum, Nedjem from Memphis, (CG 1220) and on remains of a double statue of Nedjem from Abydos.¹⁴

- On some inscribed slabs from the tomb of Haremhab, High Steward of the Ramesseum in Saqqara.¹⁵

4.3. *imy-r mš*

This title is one of the most common titles in the recorded sources from the Old Kingdom till the end of the New kingdom, The scholars translated this title in several ways, such as Jones who translated it according to Old Kingdom texts as “Expedition Leader”¹⁶, and Ward who translated it according to Middle Kingdom texts as General/Foreman.¹⁷ Beside General there are other translations of the title such as, Overseer of the Army/Expedition¹⁸ and Commander of the Army.¹⁹ Gnirs returned to the original

translation of General for *imy-r mšꜥ* and suggested that the title *imy-r mnḥꜣt* “Army Commander”, is synonymous to it.²⁰

Translating the title as “Military Officer” Schulman concluded that it was not a distinct rank, but rather a title which indicated that its bearer held a military command. He reserved the denotation of General for the title *imy-r mšꜥ wr*, which indicates a higher rank and combat-oriented post.²¹ The title *imy-r mšꜥ wr* is also attested for Iwrkhy.²² Schulman followed Helck's assumption that most of *imy-r mšꜥ* title holders were upper-level administrative offices within the military.²³

4.4. *M3ꜥt s3t Rꜥ*

The epithet “daughter of Ra” is related to many female deities such as Mut, Anat, Wadjet, Bastat and others. But it was most frequent in use with the goddess Maat, the first attestation for this epithet with Maat is from the New Kingdom and continued till the Greco-Roman Period.²⁴ The documentation of priests for *M3ꜥt s3t Rꜥ* began with the 18th Dynasty by the attestation of the title *wꜥb n M3ꜥt s3t Rꜥ* “Wab Priest of Maat daughter of Ra”.²⁵

5. Results

5.1. Remains of plaster on the sides of the stela indicate that the stela was in position between reliefs on the one side and a door jamb on the other. This suggests that it was located on the west side of the forecourt on either right or left side of the statue room (although the excavation of this tomb did not reveal any remains of statues in that room) leading to the peristyle court.

5.2. The closest resemblance in size and decoration of the lunette is stela (BM 551) from the tomb of Horemheb which was located on the south-west wall of the first court. Its height is about 2.0 m and the width 1.0 m.²⁶ The scene in the lunette depicts

²⁶Martin, G. T., *The Memphite Tomb of Horemheb Commander-In-Chief of Tutankhamun*, EES 55, London, 1989, 29-31, plates 21-22

Horemheb in adoration of a standing Re-Horakhty instead of a seated one, followed by the god Thoth who is missing on the stela of Iwrkhy and finally Maat daughter of Re. The goddess is called in the accompanying inscription "lady of heaven, mistress of the West". In the case of the stela of Iwrkhy instead of the title mistress of the West the large  *imntt* sign appears behind Maat daughter of Re.

5.3. There is an intentional comparatively large space left between the sun disk and the head of the seated god Re-Horakhty. the same can be noticed in the representation of the falcon with the sun disk on his head in the hieroglyphic writing of Re-Horakhty. In comparison with the scene in the lunette of stela (BM 551) one notices that there the sun disk is nearly directly attached to the falcon headed god Re-Horakhty and same applies to the hieroglyphic writing of the deity's name. Moje in his paleographic analysis of private stelae of the 19th dynasty mentions about this composite writing of the falcon with the sun disc (G 09) that the sun disc is commonly separated from the falcon's head.²⁷ Even when depicting the handle of the incense burner that takes the shape of a falcon head the sun disk is not directly attached to it. The larger space between the sun disk and the head of the falcon seems to be an innovative variation of the depiction during the reign of Ramesses II.

5.4. The offering stand between Iwrkhy and Re-Horakhty with a lotus flower attached to it and a  *nmst* vessel that is raised from the ground line can be compared to the same kind of offering stand shown raised in the same way on a block (Vienna 5091) depicting king Ramesses II and his sister Tia in adoration in front of a seated god.²⁸

5.5. The slender vessel with a long neck that Nehy holds in her left hand has a close parallel in a scene in the tomb of Tia and Tia which is from approximately the same time period. Princess Tia is depicted on a column in antechapel B of their tomb holding a similar vessel while joining her husband in adoration of the gods Osiris and Isis.²⁹ On the before mentioned block Vienna 5091 the princess is holding the same type of vessel.

5.6. The *ḥtp-di-nsw* formula serves the text on the left side since it is addressed *n "to"* Hatiay (the Egyptianized name of Iwrkhy who was apparently of Syrian origin) while the text on the right side describes Iwrkhy and his wife Toue. The *ḥtp-di-nsw* formula

²⁷ Moje, J., Untersuchungen zur Hieroglyphischen Paläographie und Klassifizierung der Privatstelen der 19. Dynastie, Studien zur Geschichte, Kultur und Religion Ägyptens und des Alten Testaments 67, Wiesbaden, 2007, 302.

²⁹ Martin, G.T., The Tomb of Tia and Tia A Royal Monument of the Ramesside Period in the Memphite Necropolis, 26, plate 45, scene 78.

is addressed to Hatiay by his son Ipwi/Yupa, whose name is attested on several objects in different ways of writing³⁰. He is joined by his sister Nehy.

Accordingly on this stela Iwrkhy/Hatiay, his wife Toue and two of his children Ipwi/Yupa and Nehy are mentioned which confirms the genealogy proposed by El Aguizy.³¹ The stela further supports that Ipwi/Yupa was probably the eldest son as he is the one shown offering to his father.

6. Discussion

As mentioned before the stela being discussed here was found displaced and missing its lower part. On the south-west wall of the first court to the left of the entrance to the statue room the lower part of a stela is preserved *in situ*, referred to by El Aguizy as: A *in situ* wall (fig. 7).

Fig. 7 The south-west wall of the first court showing the lower part of a stela preserved *in situ*.

Photo by the author.

This part is preserved to a height 83 cm, has a width of 1.04 m and a depth of 25 cm. When adding the two step base it reaches a height of around 1.28 m. The upper step of the base has an unusual slope in the middle that might be connected to liquid offerings.

There are remains of two registers preserved. From the upper register only the bottom of the scenes is visible. The lower register shows the funeral of Iwrkhy. On the

A Stela of Iwrkhy from his tomb in Saqqara

right side the standing mummy of the deceased is being held by his brother probably Mery-Sekhmet although the second half of his name is not preserved. The mummy is embraced from the front by his kneeling lamenting daughter Nehy. Behind her stand two sons in military attire and a second daughter of the deceased. The first son called Ramesses-Nakht burns incense, while the other son named Hatiay is holding the tools to perform the opening of the mouth ritual. The last in the row is the second daughter who is named Djama.³²

his daughter, his beloved Djama, true of voice.

Above the woman:

¹² s3.t^f Nhy

his sister, Nehy.

The title *hry-ihw*, held by both sons *Ramesses-Nakht* and *Hatiay* in the text, can be translated as “Chief of stable or Stable master”³³. It was first attested in the 18th Dynasty³⁴ and disappeared from the recorded sources after the end of the New Kingdom. The last official who held this title was Bu-thi-Amun from the 21st dynasty who held the titles *hry-ihw n nbt3wy*³⁵, “Stable master of the Lord of the two Lands” and *hry-ihw n pr-dt* “Stable master of the house of eternity” on the texts of his sarcophagus in Turin 2236-7.³⁶

The stables were of great importance in the New Kingdom and had their own administration and accordingly the title was quite common especially during the reigns of Sethy I and Ramesses II. There are three main titles associated with the administration of stables and horses and those who held these titles seem to have been mostly still at the beginning of their career.

Those titles are:

- *hry-ihw* “Stable master”
- *imy-r ssmt* “Master of horses”

³³Wb I, 121

³⁶Niowski, A., 21th Dynasty Coffins from Thebes. Chronological and Typological Studies, Theben, Band 5, Mainz am Rhein, 1988, 172.

A Stela of Iwrkhy from his tomb in Saqqara

-sš iḥw, sš ssmt “Scribe of stable , Scribe of horses”.³⁷

According to Schulman ḥry-iḥw was a scribal rank associated with the chariotry but did not necessarily have an active military role.³⁸

El Aguizy pointed out that the relationship between the family members is quite clear here depicting and mentioning two sons who are still at the beginning of their military career, Ramesses-Nakht and Hatiay as well as two daughters Nehy and Djama.

Hypothetically trying to join our stela with the lower part still *in situ* (figs. 8&9) it is remarkable how they fit in size and that the scenes at the point where the two parts were broken seem to complement each other perfectly that it is tempting to consider that both pieces belong together. After close examination of the scenes on both parts it showed however two minor differences that make the joining of the pieces questionable. The dress of Nehy is shown pleated on the lower part *in situ* while the lines of pleating cannot be traced on the displaced stela. Further there is a vessel shown under the chair of the lady that has no visible trace on the displaced stela.

Still the two pieces matching in this way allows for a hypothetical reconstruction of our stela proposing how the scenes of the lower part could have looked like. The lower part was likely similar to what is preserved on the part *in situ* and would in this case further support the idea of El Aguizy that Ramesses-Nakht is the Egyptianized name of the foreign name Ipwi/Yupa³⁹ who is not mentioned on the lower part *in situ* but is clearly represented on the displaced stela.

Could there have been two stelae nearly identical in size and decoration on both sides of the entrance to the statue room? Was the displaced stela the counterpart on the right side of the entrance to the stela of which the lower part is still *in situ*? There is no preserved case to the knowledge of the author where two nearly identical stelae were put up in one private tomb.

7. Conclusion

The displaced well preserved large limestone round-topped stela of the General of the Army Iwrkhy was discovered missing its lower part. Remains of plaster on the sides indicate that the stela was located on the west side of the forecourt of the tomb on either right or left side of the statue room. The decoration of the lunette showing Iwrkhy in adoration of Re-Horakhty and Maat daughter of Re has its closest resemblance to the lunette of stela (BM 551) from the tomb of Horemheb and might have been inspired by it. Several details in the scenes on the stela like the intentional larger space between the sun disc and the head of the falcon headed god Re-Horakhty also in the writing of his name, the depiction of the offering stand with a lotus flower attached to it holding a  *nmst* vessel where the foot of the stand is raised from the ground line as well as the slender vessel with a long neck held by lady Nehy, have their like in contemporary scenes especially from the time of Ramesses II. Interestingly Iwrkhy out of all his many titles chose the title which included the name of that king to mention on the stela which shows that he took pride in the title *steward in the temple of Wsr-mꜣ.t-Rꜥ-stp.n- Rꜥ in the estate of Amun*. With the *ḥtp-di-nsw* formula on the stela the son Ipwi/Yupa addressed the Egyptianized name of his father Hatiay. This confirmed previous assumptions about the genealogy of Iwrkhy/ Hatiay.

The hypothetical joining of the displaced stela with the lower part of a stela also belonging to Iwrkhy still *in situ* seemed to be a perfect match but differences concerning two minor details make it questionable that both pieces originally belonged together. Nevertheless the hypothetical joining of the two pieces allows to have an idea how the scenes of the lower part of the stela could have looked like. If the decoration of the lower part was similar to what is preserved on the part *in situ* showing the funeral of Iwrkhy this would support another aspect of the previously proposed genealogy claiming that Ramesses-Nakht is the Egyptianized name of the foreign name Ipwi/Yupa. He is not mentioned as Ipwi/Yupa on the lower part *in situ* but is named and shown burning incense for his father on the displaced stela indicating that he was probably the eldest son performing the incense burning for his father on the lower part of the stela as Ramesses-Nakht and in the central register of the upper part of the stela as Ipwi/Yupa.

8. Acknowledgment:

My gratitude goes to Prof. Dr. Ola El Aguizy for permitting me to publish this stela. Special thanks also to Dr. Nader El-Hassanin for the line drawings of the stela. I would also like to thank Dr. Elshaimaa M. Abdelgawad, Dr. Ghada Mohamed, Nada Mousa and Yasmeen M. M. Abd El-megied for their assistance.
