مجلة كلية التربية - جامعة العريش - مجلة علمية محكمة ربع سنوية - السنة الرابعة عشر العدد (٤٥) يناير ٢٠٢٦

الرؤية

أن تكون دورية علمية متميزة متخصصة في نشر المقالات والبحوث التربوية والنفسية. نسعى إلى التميز في نشر الفكر التربوي المتجدد والمعاصر، والإنتاج العلمي ذي الجودة العالية للباحثين في مجالي: التربية وعلم النفس، بما يعكس متابعة المستجدات، ويحقق التواصل بين النظرية والتطبيق

الرسالة

نشر وتاصيل الثقافة العلمية بين المتخصصين في المعاهد والمؤسسات العلمية المناظرة والمختصين من التربويين في الميدان التربوي من المعلمين والقيادات التربوية والباحثين، والارتقاء بمستوى الأداء في مجال التدريس والبحث العلمي من خلال نشر الأبحاث المبتكرة وعرض الخبرات الإبداعية ذات الصلة بهذا المجال، وإيجاد قنوات للتواصل والتفاعل بين أهل التخصصات المختلفة في الميدان التربوي على المستوى المحلي، والعربي، والدولي، مع تأكيد التنوع والانفتاح والانضباط المنهجي، ومتابعة الاتجاهات العلمية والفكرية الحديثة في المجال التربوي ونقلها للأوساط التربوية في مستوياتها المختلفة بغرض المساهمة في صناعة المعرفة

ABSTRACT :

This research aimed to use the Dictogloss strategy to develop EFL written production skills among preparatory stage pupils. The research adopted a quasi-experimental design using one group with a pre-post test. The participants were thirty second-year pupils at Al-Sayed Khadija Bint Khuwaylid Preparatory School for Girls in Arish, North Sinai Governorate, during the first semester of the academic year 2024–2025. The research instruments included an EFL writing test and a rubric. The Dictogloss strategy was implemented over six weeks using a set of adapted texts selected based on topics from the school curriculum. These texts were simplified to match the pupils' level and were used during the Dictogloss sessions to target specific EFL written production skills, including vocabulary, grammar, writing mechanics, handwriting, and organization. The data were analyzed using a paired t-test to determine the statistical significance of the results. The results revealed a significant development in pupils' EFL written production skills. The research concluded that Dictogloss is an effective strategy for developing pupils' written production skills; accordingly, its implementation can lead to a notable development in their writing.

Keywords: *Dictogloss Strategy, EFL Written Production Skills, Writing Skills, English as a Foreign Language, Written Production.*

المستخلص:

هدف هذا البحث إلى استخدام استراتيجية الإملاء الإنشائي (Dictogloss) لتنمية مهارات الأداء الكتابي في اللغة الإنجليزية لدى طلاب المرحلة الإعدادية. اعتمد البحث تصميمًا شبه تجريبي لمجموعة واحدة مع اختبار قبلي وبعدي، وشارك في البحث ثلاثون طالبة من الصف الثاني الإعدادي بمدرسة السيدة خديجة بنت خويلد الإعدادية بنات في مدينة العريش، محافظة شمال سيناء، وذلك خلال الفصل الدراسي الأول من العام الدراسي ٢٠٢٤-٢٠٢٥. اشتملت أدوات البحث على اختبار كتابي قبلي وبعدي مصحوب بمقياس متدرج (Rubric). استمر التدخل البحثي ستة أسابيع، وتضمن مجموعة من النصوص المعدلة بناءً على موضوعات المنهج المدرسي مع تبسيطها لتناسب مع مستوى الطلاب، واستخدامها في جلسات الإملاء الإنشائي لاستهداف مهارات محددة، وهي: المفردات، والقواعد، وآليات الكتابة، والخط، والتنظيم. وتم تحليل البيانات باستخدام اختبار (t) للعينات المرتبطة لتحديد الدلالة الإحصائية للنتائج. أظهرت النتائج تحسناً ملحوظاً في مهارات الأداء الكتابي لدى الطلاب. وبناءً على ذلك، خلص البحث إلى أن استراتيجية الإملاء الإنشائي (Dictogloss) تُعد استراتيجية فعالة في تنمية مهارات الأداء الكتابي لدى طلاب المرحلة الإعدادية، وعليه يمكن أن يؤدي تطبيقها إلى تطور واضح في كتاباتهم.

الكلمات المفتاحية: استراتيجية الإملاء الإنشائي (ديكتوجلوس)، مهارات الأداء الكتابي باللغة الإنجليزية، مهارات الكتابة، اللغة الإنجليزية كلغة أجنبية، الإنتاج الكتابي.

Introduction

English is a global language, and learning it has become widespread nowadays. Students at all educational levels are required to study this significant language. As we all know, the four main skills of any language are listening, speaking, reading, and writing. Every language learner needs to develop these skills. Despite the fact that writing is one of the most essential language skills, many students still suffer to develop their writing skills.

Writing is a fundamental and unique language skill that allows us to express, refine, and share thoughts, views, and ideas with others. It is a

crucial aspect of education and plays a vibrant role in developing a range of human talents, such as focus, awareness, creative and critical thinking, imagination planning, analysis, and connecting with others or organizations (Ibrahim,2022).

In order to successfully teach English as a foreign language, a variety of techniques and strategies have been proposed. Therefore, the role of English teachers is to assist students in learning English easily. Since writing is a crucial skill, it must be given much more attention. With proper guidance and suitable strategies, students can improve their performance and develop good writing skills. Thus, it is essential to select new strategies and teaching methods that may aid in teaching EFL smoothly and help students understand and learn better. Among these strategies, the Dictogloss strategy has gained increasing attention due to its collaborative and interactive nature.

Context of the Problem

The researcher has observed that many EFL pupils encounter challenges in writing, as they face difficulties in producing a brief and well-organized piece of writing. Therefore, finding a suitable strategy to assist pupils in developing their writing skills seems necessary. Thus, due to the importance of writing, this research aims to use the Dictogloss strategy to develop EFL pupils' written production skills.

Dictogloss is a teaching strategy that has been shown to be effective in teaching languages. Several studies have investigated its application in enhancing English language skills, including studies by Ibrahim & Olwi (2025), Ibrahim (2022), Alsamadani (2022), Abu Al-Haija (2021), El Sakka (2021), Yaseen (2020), Shadi (2019), Dewi (2017), and Taheri & Taki (2017).

To confirm the research problem, the researcher conducted a pilot study with a sample of 67 pupils in the first and second grades of the preparatory stage at two schools in Arish. The schools included Fatima Al-Zahra Preparatory School for Girls with 34 pupils and Al-Shahida Basma Saeed Rashid Preparatory School with 33 pupils. This pilot study took place on October 11, 2023, and October 16, 2023. The main goal of this pilot study was to determine the actual level of writing skills among

preparatory stage pupils. Participants were asked to write a short paragraph consisting of 4 to 6 lines.

The results of the writing test were evaluated according to Ibrahim's (2022) pre-made rubric, revealing that the majority of pupils were unable to write a single correct sentence. The results indicated a significant weakness in their written production skills such as vocabulary, grammar, writing mechanics and handwriting. The table below displays the participants' results in the pilot study.

Having observed the effective results of the Dictogloss strategy, which were confirmed by previous studies, the researcher aimed to conduct this research in order to investigate the effectiveness of using the Dictogloss strategy to develop EFL written production skills among preparatory stage pupils

Statement of the Problem

EFL learners often face challenges when writing in English, which negatively affects their academic performance and overall achievement. Therefore, this research aimed to develop EFL written production skills of preparatory stage pupils by using the Dictogloss strategy.

Research Questions

The current research aimed to answer the following questions:

1. What are EFL written production skills needed to be developed among preparatory stage pupils?
2. What is the effectiveness of using the Dictogloss strategy in developing EFL written production skills among preparatory stage pupils?

The second question was subdivided into the following sub-questions:

1. To what extent does the Dictogloss strategy develop vocabulary usage among preparatory stage pupils?
2. What is the effectiveness of using the Dictogloss strategy in developing preparatory stage pupils' grammar in writing?

3. How does the Dictogloss strategy develop the writing mechanics (spelling, capitalization, and punctuation) among preparatory stage pupils?
4. What is the effectiveness of using Dictogloss strategy in developing handwriting quality in the written production of preparatory stage pupils?
5. Does the Dictogloss strategy develop the organization of ideas in the written production of preparatory stage pupils?

Research Purposes

This research aimed to:

1. Identify EFL written production skills of preparatory stage pupils that need to be developed.
2. Investigate the effectiveness of using the Dictogloss strategy in developing EFL written production skills among preparatory stage pupils.
3. Develop key aspects of the written production skills of preparatory stage pupils including vocabulary, grammar, writing mechanics (spelling, capitalization, and punctuation), handwriting and organization.

Research Significance

This research could be useful for:

1. **Pupils:** This research can assist in developing the written production skills of preparatory stage pupils.
2. **Teachers:** It can aid English language teachers in organizing an effective teaching- learning environment based on the Dictogloss strategy.
3. **Researchers:** This research can contribute to the understanding of how to improve English written production skills and the impact of implementing the Dictogloss strategy, which can inform future studies in this area.
4. **Curriculum Designers:** The findings of this research may help curriculum designers organize, improve, and enrich English language curricula with activities based on the Dictogloss strategy.

Research Delimitations

This research was delimited to:

1. Thirty second-year preparatory stage pupils selected from Al Sayeda Khadija Bint Khuwaylid Preparatory School for Girls in Arish, North

Sinai Governorate, during the first semester of the academic year 2024-2025.

2. Specific EFL written production skills including vocabulary, grammar, writing mechanics (spelling, capitalization, and punctuation), handwriting, and organization.

Definition of Terms

1- Dictogloss

Dictogloss is defined by Elahifar et al. (2022, p.3) as “a kind of collaborative listening and writing task that promotes oral interaction, communicative competence, and written output through the understanding of the content and organizational structure of the text and its language features.”

Vasiljevic (2010, p.41) further defined it as “a classroom dictation activity where learners listen to a text, note down key words, and then work together to create a reconstructed version of the text.”

In this research Dictogloss is seen as a dictation-based strategy used to develop pupils’ written production skills. It involves listening to a short text, noting key words, and then reconstructing the text using the notes as a guide.

2- EFL Written Production Skills

Sumarno et. al (2022, p.524) defined writing as “the process of organizing and communicating ideas and thoughts into written forms with symbols as the representation of a language.”

Rao and Durga (2018, p.1) defined writing as “the system of written symbols, representing the sounds, syllables or words of language, with different mechanisms - capitalization, spelling and punctuation, word form and function.”

Dragomir and Niculescu (2020, p.202) defined productive writing as a productive skill as “the process of writing with coherence, using the suitable grammar and lexical structure, employing acceptable spelling, and choosing appropriate language.”

In this research, written production skills refer to the skills that preparatory stage pupils need to express their ideas in written form

effectively including suitable vocabulary, correct grammar, proper writing mechanics (spelling, capitalization, and punctuation), organization, and legible handwriting.

Literature Review

Part One: EFL Written Production Skills

Nature of Writing

Writing is more than simply putting words on paper. It is a dynamic process that involves a series of steps. It requires learners to think, revise, reflect, and repeat certain steps as needed (Abdrabo, 2020). According to Al-Ahaydib (2013), writing is a fundamental language skill that also serves to reinforce and improve other language skills. Additionally, it provides learners with a way to express themselves and communicate ideas.

Rao (2017) pointed out that writing is often considered the most challenging of the four language skills, as it requires attention not only to correct spelling, grammar, and punctuation but also to word choice, sentence formation, and paragraph organization. Therefore, writing encourages students to focus on using language properly. As writing engages them in thinking, it may also foster language development by helping them overcome difficulties encountered during the writing process (Kholid & Agustina, 2017).

3- Writing as a Skill

Writing is an advanced skill that involves producing clear, fluent, and extended written works. The skill of writing well is critical because it determines personal success, development, and relationships with others. For EFL learners to communicate effectively and freely, they must be able to write in English in different written forms correctly (Naguib, 2022). Writing as a skill is really significant for a variety of reasons. First of all, it serves as the foundation for assessing an individual at different stages of education. Furthermore, it expresses the individual's personality and progress while also making his or her thoughts visible (Ali et al., 2021).

4- Teaching Writing

In a lot of Arab countries, including Egypt, educational systems tend to focus on writing for test-taking purposes. For most students, the

main reason for practicing writing is to pass exams or to achieve high grades in their courses. This emphasis leads students to think of writing only as the production of a written product to get marks from their teachers. As a result, students lose interest in writing, as it becomes detached, giving no real sense of purpose for writing. In addition, the final written product produced by students is often used as a key indicator of their academic performance in EFL courses in nearly all schools and universities. Students' academic success is measured based on their final written product. Consequently, some students, despite their excellence, may perform poorly on written assessments due to the lack of essential EFL writing skills needed to express their ideas clearly. (Ahmed, 2010; Abdel-Haq & Ali, 2017).

Part Two: The Dictogloss Strategy

5- Nature of Dictogloss

Dictogloss is a language teaching strategy where learners listen to a text and collaborate to reconstruct it using their own words, with the objective of developing their language skills.

The Dictogloss strategy was introduced and popularized in 1990 by Ruth Wajnryb, an Australian teacher trainer and materials writer. The term Dictogloss combines “dictation” and “glossary”. Dictation involves one person reading a text aloud while others write down what is dictated to them, while a glossary is a list of words relating to a specific topic (Najjah et al., 2021).

In recent years, Dictogloss, also known as “grammar dictation” or “dicto-com”, has gained popularity in English teaching (Uday, 2019, p. 619). Dictogloss has been promoted as a way to encourage students to analyze their own work. It is a collaborative strategy that effectively focuses attention on both meaning and correct grammar use (Abdulnaeim, 2021).

6- Stages of Dictogloss Administration

Zeng et al. (2023), Istiqomah et al. (2022), Rezaei (2018), Gallego (2014), Stewart et al. (2014), Jibir-Daura (2013) have all mentioned that according to Wajnryb, the Dictogloss strategy consists of four stages:

The Preparation Stage

During the preparation stage, instructors introduce the topic, conduct warm-up activities to familiarize students with the main ideas and new vocabulary, and organize them into small groups or pairs. Teachers clarify tasks and objectives for students before beginning activities, provide clear instructions, and explain how the activity works to ensure that learners understand their duties. Warm-up activities such as group discussions around key vocabulary terms help activate learners' prior knowledge and promote productive usage of target words, preparing them for the listening tasks. The aim of the preparation stage is to make students more receptive to the text.

The Dictation Stage

During the dictation stage, learners listen to a text being read aloud three times; however, the number of readings depends on the level of learners and the difficulty of the text. In the first reading, learners are instructed not to note key words. In the second and third readings they are encouraged to take notes and jot down key words from the text to aid them during the reconstruction stage. Additionally, a short break included between readings may give learners the chance to discuss their notes and identify the main points. Typically, the listening text is read or played three times. The first reading provides an overall understanding, followed by subsequent repetitions to facilitate memorization and note-taking. The text is presented clearly in English at a normal speed, suitable for the learners' level.

The Reconstruction Stage

During the reconstruction stage, learners collaborate with each other, working in small groups to reconstruct the text based on their notes. The teacher monitors activities, pointing out possible grammatical errors without providing direct language input. Students aim to capture the essence of the text and generate correct grammar, using their own words to recall sequences and details. Groups reconstruct the text focusing on conveying the meaning rather than replicating the text exactly. Learners are encouraged to use all words introduced during the preparation stage. Teachers should monitor how learners interact within

their groups to make sure all of them take part and encourage silent or shy learners to participate.

The Analysis and Correction Stage

The main goal of the analysis and correction stage is to facilitate error correction and analysis based on the reconstructed texts. This stage can be adapted to cope with the needs of each classroom, with options such as writing students' reconstructed texts on the board for feedback in a sentence-by-sentence manner or reading them aloud and providing feedback. Students engage in identifying problems with text comprehension using their language skills.

7- The Advantages of Using the Dictogloss Strategy

Balousha and Syam (2019) stated that Dictogloss is simple for teachers to plan and implement, yet it requires students to listen, take notes, speak, collaborate, think critically, revise, and present. This makes it a highly effective strategy for language learning.

Ibrahim (2022) confirmed that the Dictogloss strategy enhances the development of all language skills. This strategy helps students explore new vocabulary by having them listen carefully to new words being dictated. It also helps learners to gain a deeper understanding of writing conventions, both theoretically and practically. However, when implementing the Dictogloss strategy, teachers must explain its purpose. In other words, students should understand their roles and responsibilities. From a Psychological point of view, the Dictogloss strategy increases class participation and helps reduce anxiety among participants when working in small groups. It also promotes students' autonomy, as they learn to produce their own texts rather than relying only on their instructors.

8- The Challenges of Using the Dictogloss Strategy

In addition to the advantages of Dictogloss, Hasan (2023) and Pramitha et al. (2022) identified some challenges that students may encounter when applying the strategy:

- Learners may lose interest in the task if they do not understand what they are listening to.
- Listening to unfamiliar words can be challenging for many learners.

- In some cases, the teacher may leave the students to listen to an audio recording on their own without support.
- Dictogloss stages require a significant amount of time to be effectively implemented.
- It may not be as effective for lower-level learners.

Studies Related to the Dictogloss Strategy

Ibrahim and Olwi (2025) conducted a study to utilize the Dictogloss strategy to enhance EFL writing skills among 133 first-year medical students at Arish University during the first semester of 2023–2024. The study focused on linguistic organization, language structure, word choice, writing mechanics, and editing skills, using a paragraph writing test and a scoring rubric as instruments. The results showed a significant improvement in students' overall writing skills, especially in organization and writing mechanics, confirming the effectiveness of the Dictogloss strategy.

Jafar (2023) conducted research to explore the effect of the Dictogloss strategy on improving motivation for learning EFL writing skills among Nigerian secondary school students. The research utilized a quasi-experimental design with a total of 120 students, divided equally into experimental and control groups. The findings revealed a significant improvement in students' motivation for learning EFL writing skills through the use of the Dictogloss strategy.

In his research, Alsamadani (2022) investigated the effect of the Dictogloss strategy on Saudi EFL writing skills and attitudes towards learning English. By randomly selecting and dividing Saudi EFL college-level students into experimental and control groups, the research compared the Dictogloss strategy with the traditional method for five weeks. The results revealed a significant statistical difference in students' writing skills, motivation in the class, and language output in favor of the experimental group. Moreover, the research recommended training EFL teachers on using Dictogloss during teaching writing and emphasized the use of topic-based Dictogloss materials to facilitate collaborative language skill integration.

In addition, Ibrahim (2022) conducted research to examine the impact of using the Dictogloss strategy on improving writing conventions for EFL freshmen students. The research focused on spelling, grammar, capitalization, punctuation, and handwriting. It included a sample of 78 EFL freshmen from the Faculty of Education at Arish University during the second semester of the academic year 2020–2021. The results showed a significant difference in mean scores between the pre- and post-administration of the writing test, with higher scores in the post-test. Therefore, the Dictogloss strategy was found to be effective in enhancing writing conventions. Additionally, the research emphasized the effectiveness of the Dictogloss strategy in improving all language skills, fostering autonomy, increasing class participation, and reducing student anxiety.

Abu Al-Haija (2021) conducted research to investigate the impact of implementing the Dictogloss strategy on enhancing students' writing skills from the perspective of teachers in schools in Jenin City, Palestine. The research utilized a descriptive-analytical approach. The findings indicated that teachers recognized the positive effects of the Dictogloss strategy in improving students' teamwork and vocabulary. Additionally, the results revealed that the majority of teachers (85.1%) were already familiar with the Dictogloss strategy and had previously used it, while most teachers (96.9%) believed that implementing the strategy in the classroom required additional time.

Shadi's study (2019) aimed to investigate the effect of using the collaborative Dictogloss strategy on improving the writing skills of Al-Azhar preparatory students. The research utilized a quasi-experimental design with a sample of 64 students from Nekeita Preparatory and Secondary Institute for Boys in Dakahlia Governorate, divided equally into experimental and control groups. The results showed that the experimental group outperformed the control group on the post-test. Therefore, the Dictogloss strategy was found to be effective in improving the EFL writing skills of Al-Azhar first-year preparatory students.

Although several studies have explored the use of the Dictogloss strategy to develop writing skills in EFL contexts, most of these studies focused on higher educational levels such as secondary or university

stages. Only one study conducted by Shadi (2019) applied the Dictogloss strategy to improve the writing skills of Al-Azhar preparatory pupils.

Therefore, there is a noticeable gap in the literature concerning the use of the Dictogloss strategy at the preparatory stage in general education schools. The current research aims to fill this gap by investigating the effectiveness of using the Dictogloss strategy to develop EFL written production skills among preparatory stage pupils.

After reviewing the previous studies, the researcher became hopeful that using the Dictogloss strategy would help develop EFL written production skills among preparatory stage pupils.

9- Research Hypotheses

To investigate the effectiveness of using the Dictogloss strategy in developing the written production skills of preparatory stage pupils, the following hypothesis was developed:

- There would be a statistically significant difference at the 0.05 level between the mean scores of the experimental group on the pre-post writing test in favor of the post test.

The main hypothesis was subdivided into the following sub-hypotheses:

1. There would be a statistically significant difference at the 0.05 level between the mean scores of the experimental group on the pre-post writing test in terms of vocabulary usage in written production, in favor of the post-test.
2. There would be a statistically significant difference at the 0.05 level between the mean scores of the experimental group on the pre-post writing test in grammar, in favor of the post-test.
3. There would be a statistically significant difference at the 0.05 level between the mean scores of the experimental group on the pre-post writing test in writing mechanics (spelling, capitalization, and punctuation), in favor of the post-test.

4. There would be a statistically significant difference at the 0.05 level between the mean scores of the experimental group on the pre-post writing test in handwriting quality, in favor of the post test.

5. There would be a statistically significant difference at the 0.05 level between the mean scores of the experimental group on the pre-post writing test in the organization of ideas, in favor the post-test.

Research Variables

➤ The independent variable

The Dictogloss Strategy

➤ The dependent variable

EFL written production skills.

Design

The research employed a quasi-experimental design, using one group with a pre-post test. The administration of the treatment was conducted during the first semester of the academic year 2024–2025.

Participants

The research participants were thirty second-year preparatory pupils, aged 13–14, at Al-Sayed Khadija Bint Khuwaylid Preparatory School for Girls in Arish, North Sinai Governorate. The participants were randomly selected during the first semester of the academic year 2024–2025.

Research Instruments

- An EFL writing test: a writing task that is given to the pupils before and after using the strategy to determine if there is a significant development in their written production skills.
- A rubric to correct the quality of pupils' writing.

Validity of the Test

To ensure the content validity of the EFL writing test. The test was designed to assess pupils' EFL written production skills through the Dictogloss strategy, focusing on vocabulary, grammar, organization,

handwriting, and writing mechanics (spelling, punctuation, and capitalization).

The initial version of the test was submitted to a jury of thirteen experts in the field of TEFL English Language Curricula and Teaching Methods. Based on their feedback, several modifications were made. These included revising the instructions of the test for better clarity, providing the instructions in both English and Arabic, and adjusting the duration of the test to 45 minutes instead of 30 minutes.

Reliability of the test

To assess the reliability of the test, the test re-test method was employed. A pilot administration was conducted on a sample of 25 second-year preparatory stage pupils at Al-Sayeda Khadija Bint Khuwaylid Preparatory School for Girls twice, with a gap between the two tests. The Pearson correlation coefficient was calculated to determine if the pupils' scores on the first test were similar to those on the second test. The result was 0.90, indicating a strong positive relationship between the two sets of scores.

The Validity of the Rubric

After collecting the feedback from the jury members, several modifications were made to improve the clarity and consistency of the rubric. The spelling, punctuation, and capitalization criteria were combined into a single category called Writing Mechanics. A scoring scale based on the number of mistakes was applied. The description under the organization criterion was refined to improve clarity. These adjustments were made to ensure the rubric is more accurate, reliable and practical for evaluating

The Reliability of the Rubric

A pilot administration of the rubric was conducted to ensure its reliability. It was used to evaluate the same test at different times. The Pearson correlation coefficient between the two sets of scores was 0.97, indicating a very strong significant correlation. This high level of consistency demonstrates that the rubric is highly reliable and suitable for evaluating pupils' written production skills.

The Dictogloss Materials

The materials used in the treatment of this research were carefully selected to suit the age, interests, and language level of second-year preparatory stage pupils. The selection of the texts was based on the themes of the school textbook. Some texts were directly adapted from second-year preparatory English textbook, while others were written by the researcher. All texts were designed or modified to match pupils' language level. Their readability was measured and needed adjustments were made to make sure that the language was not too difficult for pupils while still helping them to improve their skills. The main aim was to provide a variety of texts that pupils could easily understand, relate to, and enjoy writing about. Therefore, the topics were selected to match pupils' interests and keep them engaged and motivated to participate.

Research Implementation

The research implementation consisted of 17 sessions, which lasted from the beginning of November to the middle of December 2024. These sessions included an introductory session, a pre-test session, fourteen treatment sessions, and a post-test session. Each session took about 50 minutes.

Table (1) shows the framework of the sessions

Session No.	Date	Duration	Topic	Objectives
Introductory Session	5/11/2024	50 Minutes	How to be Healthier	• Introduce the Dictogloss Strategy. • Observe pupils' reactions. • Assess time suitability.

Session No.	Date	Duration	Topic	Objectives
Pre-Test Session	12/11/2024	50 Minutes	How to be Healthier	Assess pupils' EFL written production skills before implementing the treatment sessions.
Session One & Session Two	13/11/2024	An hour and 40 Minutes	Mohamed Salah & The Internet	- Emphasize the importance of vocabulary in writing. - Improve the use of vocabulary related to different topics.
Session Three	14/11/2024	50 Minutes	Daily Routine	- Highlight the importance of grammar in writing. - Introduce the present simple tense.
Session Four	19/11/2024	50 Minutes	Sameera Moussa	Introduce the past simple tense.
Session Five	19/11/2024	50 Minutes	A Short Story	Reinforce pupils' understanding of the past simple tense.

Session No.	Date	Duration	Topic	Objectives
Session Six	26/11/2024	50 Minutes	Magdy Yacoub	Focus on the using of proper capitalization in writing.
Session Seven	26/11/2024	50 Minutes	My Favorite Day of the Week	Focus on the using of proper punctuation in writing.
Session Eight	27/11/2024	50 Minutes	Naguib Mahfouz	Focus on the using of correct spelling in writing.
Session Nine	2/12/2024	50 Minutes	My Room	Introduce the importance of clear handwriting.
Session Ten	3/12/2024	50 Minutes	Traditional Egyptian Dish	Emphasize writing clearly with proper space between words and letters.
Session Eleven	3/12/2024	50 Minutes	Random Acts of Kindness	Introduce the concept of organizing a paragraph.
Session Twelve	4/12/2024	50 Minutes	The Importance of Water	Emphasize how to organize a paragraph.
Session Thirteen	5/12/2024	50 Minutes	What Teenagers Should Do	Review all EFL written production

Session No.	Date	Duration	Topic	Objectives
			and What They Shouldn't Do	skills targeted in the previous sessions.
Session Fourteen	5/12/2024	50 Minutes	Friendship	Review all EFL written production skills targeted in the previous sessions.
Post-Test Session	15/12/2024	50 Minutes	How to be Healthier	Assess pupils' EFL written production skills after implementing the treatment sessions.

Research Results

The data analysis focused on evaluating the effectiveness of using the Dictogloss strategy to develop EFL written production skills among preparatory stage pupils. To achieve this, a pre-post writing test was conducted on one experimental group. The data were analyzed using the paired-samples t-test, a statistical method designed to compare the means of two related samples. This test was used to determine if there were statistically significant differences between the pupils' mean scores before and after implementing the Dictogloss strategy.

10- Results of the Main Hypothesis

The results of the paired samples t-test revealed a statistically significant improvement in the experimental groups' EFL written production skills after implementing the Dictogloss strategy. The mean score increased from 2.85 in the pre-test to 6.14 in the post-test.

Furthermore, the p-value of 0.000025 was much smaller than 0.05, proving that the difference between the pre-test and post-test scores was statistically significant as shown in Table (2), indicating a substantial improvement in second-year preparatory pupils' EFL written production skills. The results show a significant improvement in the pupils' overall written production skills after the implementation of the Dictogloss strategy. The large effect size (Cohen's $d=2.09$) indicates the significant effect of the Dictogloss strategy. This strongly supports the research hypothesis, and suggests that the Dictogloss strategy is highly effective in developing EFL written production skills.

Table (2) Paired samples t-test results comparing pre- and post-test scores in terms of EFL written production skills.

Measure	Mean	Std	t-value	Sig.
Pre-Test	2.85	1.46	-11.5	0.000025
Post-Test	6.14	1.67		

11- 16.2. Results of the First Sub-Hypothesis

The first sub-hypothesis states that: "There would be a statistically significant difference at the 0.05 level between the mean scores of the experimental group on the pre-post writing test in terms of vocabulary usage in written production, in favor of the post-test."

The results of the pre-post test reveal a significant improvement in developing the vocabulary usage, the pupils' mean score increased from 1.57 in the pre-test to 2.57 in the post-test. The main findings of the vocabulary t-test are summarized in Table (3). These results demonstrate that the collaborative and interactive nature of the Dictogloss strategy effectively developed pupils' usage of vocabulary. Since, p-value of 0.0176 is smaller than 0.05, indicating that the difference between the pre-test and post-test scores was statistically significant.

Table (3) Paired samples t-test results in terms of vocabulary usage

Measure	Mean	Std	t-value	Sig.
Pre-Test	1.57	0.52		

Post-Test	2.57	0.97	-3.240	0.0176
------------------	------	------	--------	--------

12- 16.3. Results of the Second Sub-Hypothesis

The second sub-hypothesis states that: “There would be a statistically significant difference at the 0.05 level between the mean scores of the experimental group on the pre-post writing test in grammar, in favor of the post-test.”

The results of the pre-post test show a significant improvement in developing grammar skills after applying the Dictogloss strategy. The mean score increased from 1.28 in the pre-test to 2.57 in the post-test. This improvement is supported by the paired t-test results, with a p-value of 0.0116, indicating a statistically significant difference. The main results of the t-test for grammar are summarized in table (4).

Table (4) Paired samples t-test results in terms of grammar

Measure	Mean	Std	t-value	Sig.
Pre-Test	1.28	0.47	-3.576	0.0116
Post-Test	2.57	0.97		

13- 16.4. Results of the Third Sub-Hypothesis

The third sub-hypothesis states that: “There would be a statistically significant difference at the 0.05 level between the mean scores of the experimental group on the pre-post writing test in writing mechanics, in favor of the post-test.”

The results of the research demonstrate a significant improvement in developing writing mechanics after applying the Dictogloss strategy. As presented in Table (5), the mean score increased from 1.14 in the pre-test to 2.14 in the post-test. This improvement is supported by the t-test results where the p-value of 0.0176 is lower than 0.05, proving that the difference between the pre-test and post-test scores was statistically significant.

Table (5) Paired samples t-test results in terms writing mechanics

Measure	Mean	Std	t-value	Sig.
Pre-Test	1.14	0.37	-3.240	0.0176
Post-Test	2.14	0.68		

14- 16.5 Results of the Fourth Sub-Hypothesis

The fourth sub-hypothesis states that: “There would be a statistically significant difference at the 0.05 level between the mean scores of the experimental group on the pre-post writing test in handwriting quality, in favor of the post test.”

As Table (6) demonstrates, the results indicate a significant improvement in developing pupils’ handwriting. The mean score increased from 1.57 in the pre-test to 2.57 in the post-test. This is supported by the p-value of 0.0037, which is lower than 0.05, indicating that the difference between the pre-test and post-test scores is statistically significant.

Table (6): Paired samples t-test results in terms of handwriting

Measure	Mean	Std	t-value	Sig.
Pre-Test	1.57	0.52	-4.582	0.0037
Post-Test	2.57	0.78		

15- 16.6. Results of the Fifth Sub-Hypothesis

The fifth sub-hypothesis states that: “There would be a statistically significant difference at the 0.05 level between the mean scores of the experimental group on the pre-post writing test in the organization of ideas, in favor the post-test.”

The research results reveal a significant improvement in developing pupils’ organization skill. The main results of the t-test for organization are summarized in Table (7). The mean score increased from 1.43 in the pre-test to 2.00 in the post-test. This improvement is further supported by the t-test results, with a p-value of 0.0166, indicating that the difference between the pre-test and post-test scores is statistically significant.

Table (7) Paired samples t-test results in terms of organization

Measure	Mean	Std	t-value	Sig.
Pre-Test	1.14	0.37	-3.286	0.0166
Post-Test	2	0.81		

Discussion of the Results

The findings of the current research revealed a significant improvement in preparatory pupils' EFL written production skills after applying the Dictogloss strategy.

These results are consistent with several previous studies. They align with Ibrahim and Olwi (2025), whose research on medical students showed improvement in organization and writing mechanics, and with Shadi (2019), who found positive effects among Al-Azhar preparatory students, suggesting that Dictogloss is effective across different educational contexts.

The pupils' active participation and enthusiasm during sessions also support findings by Jafar (2023) and Alsamadani (2022), who reported that Dictogloss enhances both writing performance and learners' motivation. Similarly, improvement in grammar agrees with Mayhoub (2023), Al-Obaydi and Al-Mosawi (2019), and Murad (2017), who confirmed the strategy's role in developing grammatical competence through active text reconstruction.

Progress in writing mechanics and handwriting align with Ibrahim (2022), who found significant improvement in spelling, punctuation, capitalization, and handwriting after using Dictogloss. Pupils' improvement in organization also supports Putri et al. (2020) and Pertiwi et al. (2018), who concluded that The collaborative nature of the Dictogloss encourages students to structure their ideas logically and cohesively, leading to better organization.

Finally, although Abu Al-Haija (2021) noted that the Dictogloss strategy requires additional classroom time, the current research demonstrates that with proper planning, Dictogloss can be effectively integrated into EFL writing instruction.

In conclusion, this research supports previous studies' findings on the effectiveness of the Dictogloss strategy in developing various aspects of EFL written production skills.

Recommendations

Based on the findings and conclusions of this research, the following recommendations are proposed:

- The use of the Dictogloss Strategy is highly recommended to be applied in classrooms to develop EFL written production skills.
- English language teachers should be trained, given workshops, and instructional materials related to how to apply the Dictogloss strategy in their classrooms and modify it for different pupils' language levels.
- Teachers should provide ongoing formative assessment and detailed feedback on pupils' writing to track progress and address weaknesses in EFL written production skills.
- Pupils should be encouraged to practice writing outside the classroom by keeping journals, writing blog posts, or engaging in writing activities to improve their skills.

Suggestions for Further Research

Based on the research findings, the following areas for future research are suggested:

- Future research could investigate the effect of Dictogloss on developing pupils' listening comprehension skills.
- Further research could examine the impact of the Dictogloss strategy on improving speaking skills.
- This research was conducted with preparatory stage pupils; therefore, another research could investigate the effectiveness of using the Dictogloss strategy in enhancing EFL written production skills at different educational stages, such as elementary or secondary stages.
- Another research could explore the effect of integrating the Dictogloss strategy with technology, such as digital storytelling or interactive whiteboards, to improve EFL writing skills.
- Additionally, research could examine the effectiveness of using the Dictogloss strategy in improving specific aspects of writing, such as coherence and cohesion.
- Furthermore, research could also be conducted on teachers' perceptions and attitudes toward using the Dictogloss strategy in teaching EFL writing skills.
