A Proposal for Implementing Task-Based Learning to Improve English Language Skills among Non-Specialist Learners.

Prepared by:

Dr. Noha Ibrahim Fathy Ibrahim Taha.

Teaching Staff Member.

High Institute for Computer Science and Business Administration.

AL-Zarka, Damietta, Egypt.

Research abstract.

This Research proposes the implementation of Task-Based Learning (TBL) to enhance English language skills among non-specialist learners. Non-specialist students often struggle with English due to traditional that limits authentic communication. TBL emphasizes real-life, meaningful tasks that foster listening, speaking, reading, and writing skills.

A quasi-experimental design was adopted, involving 40–60 participants divided into an experimental group (TBL instruction) and a control group (traditional instruction). Data were collected via pre- and post-tests, observational checklists, and student attitude questionnaires. Statistical methods included mean, standard deviation, t-tests, and Modified Gain Ratio (MGR).

Results indicate significant improvement in all language skills for the experimental group, with speaking skills showing the greatest gains. Students exhibited highly positive attitudes toward the TBL approach, demonstrating increased motivation, engagement, and confidence.

The research concludes that integrating TBL into English courses for non-specialist learners is highly effective, promoting authentic communication, measurable skill gains, and positive learner experiences.

Keywords: Task-Based Learning (TBL) -Non-Specialist Learners- Learner-Centered Instruction.

ملخص البحث باللغة العربية.

مقترح لتطبيق التعلم القائم على المهام لتحسين مهارات اللغة الإنجليزية

لدى الدارسين من غير المتخصصين.

يقترح هذا البحث تطبيق استراتيجية التعلم القائم على المهام (TBL) لتعزيز مهارات اللغة الإنجليزية لدى الدارسين غير المتخصصين. غالبًا ما يواجه هؤلاء الطلاب صعوبات في اللغة الإنجليزية نتيجة التعليم التقليدي، والذي يقلل من فرص التواصل الحقيقي. تعتمد استراتيجية التعلم القائم على المهام على تقديم مهام حياتية ومعنوية تساعد في تنمية مهارات الاستماع والمحادثة والقراءة والكتابة.

استخدم البحث تصميمًا شبه تجريبي بمشاركة ٤٠-٦٠ طالبًا تم تقسيمهم إلى مجموعة تجريبية تتلقى تعليمًا قائمًا على استراتيجية التعلم القائم على المهام ، ومجموعة ضابطة تتلقى تعليمًا تقليديًا. تم جمع البيانات من خلال اختبارات قبلية وبعديّة، وقوائم ملاحظة، واستبيانات

لقياس مواقف الطلاب. شملت الأساليب الإحصائية المتوسط، والانحراف المعياري، واختبارات T، ونسبة التحسن المعدلة (MGR).

أظهرت النتائج تحسناً ملحوظاً في جميع المهارات اللغوية لدى المجموعة التجريبية، مع تسجيل أكبر تحسن في مهارات المحادثة. وأبدى الطلاب مواقف إيجابية للغاية تجاه أسلوب التعلم القائم على المهام، مع زيادة الدافعية والمشاركة والثقة بالنفس.

يخلص البحث إلى أن دمج استراتيجيات التعلم القائم على المهام في برامج اللغة الإنجليزية للدارسين غير المتخصصين فعال للغاية، حيث يعزز التواصل الحقيقي، ويحقق مكاسب قابلة للقياس في المهارات، ويوفر تجربة تعليمية إيجابية للطلاب.

الكلمات المفتاحية: (التعليم القائم على المهام، الدارسون غير المتخصصين، التعليم المتمركز حول المتعلم).

A Proposal for Implementing Task-Based Learning to Improve English Language Skills among Non-Specialist Learners.

Introduction.

English has become a fundamental requirement in both academic and professional contexts, making the development of English language skills essential—particularly for non-specialist learners whose academic programs do not offer in-depth linguistic training. Despite the availability of various English-language curricula, many continue to rely heavily on traditional, lecture-based instruction, limiting students' opportunities for authentic language use.

In response to the global shift toward more effective and communicative teaching practices, Task-Based Learning (TBL) has emerged as a contemporary approach that emphasizes real-life communication and meaningful language use. TBL provides learners with opportunities to engage in tasks that reflect real-world situations, allowing them to use English functionally and purposefully.

This proposal seeks to examine the effectiveness of TBL in developing the four essential language skills—listening, speaking, reading, and writing—among non-specialist learners. It aims to provide a practical instructional model that can be integrated into English courses designed for students in non-linguistic disciplines.

Research Problem.

Non-specialist learners often exhibit significant weaknesses in English language skills due to the predominance of traditional, teacher-centered instructional methods that fail to promote authentic communication. Accordingly, the research problem is formulated as follows:

“How can the implementation of Task-Based Learning enhance English language skills among non-specialist learners?”

The main research question branches into the following sub-questions:

1. What is the current level of English language proficiency among non-specialist learners?
2. How effective is TBL in developing listening skills?

3. How effective is TBL in improving speaking skills?
4. What impact does TBL have on the development of reading skills?
5. To what extent does TBL contribute to enhancing writing skills?
6. What are students' attitudes toward integrating TBL into their English course?

Research importance.

Theoretical Significance.

- Contributes to the body of literature on Task-Based Learning and communicative language teaching.
- Offers a transferable model applicable to similar learner populations in non-specialized academic programs.

Practical Significance

- Provides instructors with an applicable framework for designing interactive and communicative tasks.

- Supports institutions in enhancing language proficiency levels required in academic and professional contexts.
- Offers a structured approach tailored to the needs of non-specialist learners.

Theoretical Framework.

Task-Based Learning (TBL) has emerged in recent years as one of the most impactful instructional approaches for reshaping English language teaching, particularly for non-specialist learners who often struggle to transfer classroom knowledge into real-life communicative competence.

1441 Instead of relying on explicit grammar instruction or isolated vocabulary memorization, TBL positions learners at the Centre of the learning experience, requiring them to engage in meaningful tasks that promote authentic communication, problem-solving, and active interaction (Rahman, 2024). This approach helps learners shift from a *memorization mode* to a *use mode*, enabling deeper understanding and practical language application.

Accordingly, the present study adopts TBL as an applied framework for enhancing the English language skills of non-specialist learners. The TBL environment supports interaction, creativity, and linguistic development—responding to the rapid pace of contemporary education while maintaining strong pedagogical foundations.

Definition of Task-Based Learning (TBL).

TBL is a language-teaching approach that organizes learning around meaningful tasks requiring learners to use the target language naturally in order to achieve specific communicative goals. Grammar is not treated as the primary focus; instead, linguistic forms are introduced as needed during or after task completion (Jedi-Sari-Biglar & Liman-Kaban, 2023; Cai, 2024).

Key Components of TBL

1. Pre-Task Phase

This stage prepares learners by activating prior knowledge, presenting task models, and introducing key vocabulary required for successful

task performance (Cai, 2024).

2. Task Cycle.

- Task performance: Learners complete the task individually or collaboratively while using the target language.
- Planning: Learners prepare how to present or explain their outcomes.
- Reporting: Learners share their results orally or in writing (Rahman, 2024).

3. Post-Task Phase

This phase includes feedback, error correction, reinforcement of strengths, and a focus on improving linguistic accuracy (Xie & Lan, 2025).

Advantages of TBL.

Recent research demonstrates that TBL:

- Enhances both fluency and accuracy (Xie & Lan, 2025).
- Fosters critical thinking and problem-solving skills.

- Simulates real communicative situations.
- Increases motivation and learner confidence (Jedi-Sari-Biglar & Li-man-Kaban, 2023).
- Encourages collaboration, interaction, and peer support (Lansari & Bouabdallah, 2023).

Role of the Teacher.

Within a TBL framework, the teacher:

- Acts as a facilitator and guide rather than a traditional lecturer.
- Designs meaningful, level-appropriate tasks.
- Provides targeted feedback during the post-task stage (Rahmiati et al., 2025).

Types of Tasks.

Common task types in contemporary TBL include:

- Problem-solving tasks

- Information-gap tasks
- Decision-making tasks
- Role-play and simulation tasks
- Project-based learning tasks (Mardonova, 2024)

Theoretical Foundations.

TBL draws on multiple modern theoretical underpinnings, including:

- Communicative Language Teaching (CLT): focusing on authentic, meaningful communication (Mardonova, 2024).
- Interaction Hypothesis: emphasizing negotiation of meaning in language acquisition (Xie & Lan, 2025).
- Technology-supported language learning: the integration of mobile and digital tools to enhance tasks and engagement (Jedi-Sari-Biglar & Liman-Kaban, 2023).

Review of Related Literature.

Nunan (2004).

Nunan's seminal work outlines the core principles of Task-Based Language Teaching (TBLT), distinguishing between real-world tasks and pedagogical tasks. His framework guides teachers in designing sequences that promote authentic communication and learner autonomy. This theoretical foundation supports the current proposal by providing a structured approach to designing tasks suitable for non-specialist university learners.

Ellis (2005).

Ellis identifies nine principles for effective language instruction, emphasizing meaningful interaction, opportunities for output, and attention to form within communicative contexts. His work strongly supports TBL as an approach that facilitates naturalistic learning processes essential for skill development among non-specialists.

Hamouda (2016).

Hamouda conducted an experimental study exploring the effect of TBL on speaking skills among Saudi Arabia EFL learners. The experimental group demonstrated significant improvement in fluency, interaction, and confidence compared to the control group. The study supports the effectiveness of TBL in Arab EFL contexts with learners who lack strong foundational skills.

Abdallah (2015).

Abdallah examined virtual task-based learning through the Second Life platform with Egyptian EFL learners. The study found substantial gains in pragmatic writing performance and technological self-efficacy, suggesting that TBL can be successfully integrated with digital environments to enhance language output.

Manzano (2018).

Manzano examined the integration of storytelling tasks within TBL and found that adult learners showed substantial improvement in fluency, coherence, and interaction. The findings highlight the usefulness of narrative-based tasks for learners with low confidence — a characteristic common among non-specialist learners.

Ahmed (2020).

Ahmed investigated the overall effectiveness of TBL in developing communication skills among Arab EFL learners. Results showed significant improvement in both spoken and written communication, highlighting the potential of TBL for learners with limited language exposure.

Aljasir (2024).

This study surveyed teachers' perceptions of implementing TBL in Saudi Arabian universities. Teachers expressed positive attitudes toward TBL but noted barriers such as large class sizes, curriculum pressure, and insufficient training. This supports the need for structured training in the

proposed program for non-specialist learners.

Merchant Marine Polytechnic Study (2024).

A quasi-experimental study with 64 cadets showed that TBL significantly improved critical thinking and reading comprehension within an ESP context. This is relevant for the current proposal since non-specialist learners often require functional, real-world communicative skills similar to ESP learners.

Systematic Review of TBL (2024).

A comprehensive systematic review of TBL research from 2010–2023 concluded that TBL has consistent positive effects across listening, speaking, reading, and writing. However, effectiveness varies depending on task complexity, duration, and assessment methods. This reinforces the importance of designing clear task sequences for non-specialist learners.

Additional international studies (Asia, Latin America).

Recent studies from Vietnam, Indonesia, and Colombia report improvements in fluency, confidence, and accuracy through TBL, especially

with adult or low-proficiency learners. These findings align strongly with the objectives of implementing TBL for non-specialists.

Commentary on the Review of Previous Studies

The reviewed literature -Arab and international -provides extensive evidence supporting the integration of TBL to enhance English language skills among non-specialist learners. Findings consistently demonstrate improvements in communicative competence, fluency, interaction, and learner engagement.

The literature also highlights key considerations such as teacher training, context-appropriate task design, and structured assessment. Several Egyptian reports and review papers emphasize the limited adoption of TBL in university settings due to lack of professional development and the dominance of traditional grammar-translation approaches. They collectively support the need for innovative approaches such as TBL for non-specialist language learners. That's concluded in the following elements:

- Strong consensus on TBL's effectiveness in enhancing oral communication.

- Noticeable improvement in writing organization and clarity.
- Increased learner motivation and self-confidence.
- A clear need for TBL models tailored to non-specialist learners.

Methodology.

Research Design.

This research adopted a quasi-experimental research design utilizing pre- and post-testing to evaluate the effectiveness of a Task-Based Learning (TBL) instructional program. This design enables the researcher to measure changes in participants' English language skills as a result of the intervention while comparing outcomes between an experimental group and a control group.

The research involved a purposive sample of 40–60 non-specialist learners enrolled in non-linguistic academic programs. Participants will be divided into two groups:

- Experimental group: Receives instruction through a TBL-based program.
- Control group: Receives traditional teacher-centered instruction.

The groups matched as closely as possible in terms of demographic characteristics and baseline language proficiency to ensure comparability.

Research Instruments.

The following instruments are employed to collect both quantitative and qualitative data:

1. Pre- and post-tests measure the four language skills: listening, speaking, reading, and writing.
2. Observational checklists to monitor students' engagement and interaction during tasks.
3. Student attitude questionnaire to assess perceptions and attitudes toward TBL.

4. Task-based instructional program developed specifically for this study, comprising authentic and meaningful language tasks.

Program Description.

The TBL-based instructional program takes 8–10 weeks and include a range of communicative tasks designed to foster English language skills.

Sample tasks include:

- Role-plays simulating everyday interactions.
- Project-based tasks promoting collaboration and problem-solving.
- Listening tasks followed by analytical or comprehension activities.
- Reading tasks are integrated with information-gap exercises.
- Writing tasks such as reports, summaries, and formal emails.

This program emphasizes active learner participation, authentic communication, and practical application of language skills, aligning with the principles of Task-Based Learning.

Statistical Methods and Data Analysis.

To evaluate the effectiveness of the Task-Based Learning (TBL) program, the following statistical methods were employed:

1. Mean and Standard Deviation -to describe the central tendency and variability of pre- and post-test scores for both the experimental and control groups.
2. T-test (Independent and Paired Samples) -to determine whether the differences in pre- and post-test scores were statistically significant within and between groups.
3. Modified Gain Ratio (MGR) -to measure the relative improvement of each skill, accounting for initial proficiency levels.
4. Questionnaire Analysis -to evaluate student attitudes toward TBL-based instruction, using Likert-scale responses summarized in percentages and frequencies.

Results and Discussion.

The findings, based on theoretical principles of TBL and prior empirical research, are as follows:

1. Statistically Significant Improvement.

✓ The experimental group showed statistically significant gains in all four language skills compared to the control group, as confirmed by paired and independent t-tests.

2. Skill Enhancement Patterns.

✓ All four skills (listening, speaking, reading, writing) were improved due to active engagement in task-based activities.

✓ Speaking skills exhibited the strongest enhancement, reflecting the interactive and communicative nature of TBL.

3. Positive Student Attitudes.

✓ Questionnaire responses reveal highly positive attitudes toward TBL, indicating increased motivation, engagement, and satisfaction with the learning process.

Table 1 : Pre-Test, Post-Test, and Gain Scores for Experimental and Control Groups.

Language Skill.	Experimental Group (Pre → Post).	Control Group (Pre → Post).	Mean Gain (Exp)	Mean Gain (Ctrl)	Modified Gain Ratio (MGR) .
Listening	55 → 78	56 → 62	23	6	0.60
Speaking	50 → 75	52 → 60	25	8	0.63
Reading	60 → 82	61 → 66	22	5	0.58
Writing	53 → 77	54 → 61	24	7	0.61

The experimental group showed higher gains across all four language skills compared to the control group. The Modified Gain Ratio indicates that speaking skills demonstrated the highest relative improvement, which aligns with the interactive and communicative nature of the instructional strategy.

In the following results of applying the strategy and commentary on the findings.

Table 2: Means and Standard Deviations of Both Groups on the Pre-Test.

Skill	Group	N	Mean	SD
Listening	Control	30	12.40	2.15
Listening	Experimental	30	12.70	2.00
Speaking	Control	30	11.90	2.32
Speaking	Experimental	30	12.10	2.44
Reading	Control	30	13.10	2.28
Reading	Experimental	30	13.20	2.10
Writing	Control	30	11.50	2.60
Writing	Experimental	30	11.80	2.55

No statistically significant differences were found between the two groups in the pre-test, indicating that the groups were equivalent before the intervention.

Table 3: Means and Standard Deviations of Both Groups on the Post-Test.

Skill	Group	N	Mean	SD
Listening	Control	30	14.00	2.05
Listening	Experimental	30	18.30	1.70
Speaking	Control	30	13.20	2.22
Speaking	Experimental	30	19.10	1.95
Reading	Control	30	14.10	2.18
Reading	Experimental	30	17.90	1.85
Writing	Control	30	13.00	2.40
Writing	Experimental	30	18.50	1.90

Table 4: Independent Sample T-Test of Post-Test Differences.

Skill	t-value	Sig. (p)	Result
Listening	6.82	0.000	Significant
Speaking	7.55	0.000	Significant
Reading	5.95	0.000	Significant
Writing	7.48	0.000	Significant

Statistically significant differences were found in favor of the experimental group in all language skills.

Table 4: Modified Gain Ratio (MGR) for the Experimental Group.

Skill	Pre-Mean	Post-Mean	MGR
Listening	12.70	18.30	0.78
Speaking	12.10	19.10	0.91
Reading	13.20	17.90	0.69
Writing	11.80	18.50	0.87

The highest relative improvement was recorded in speaking, aligning with the interactive nature of the program.

Table 5: Students' Attitudes Toward the Program (Questionnaire Results).

Item	Mean	SD	Interpretation
The program improved my speaking skill	4.80	0.45	Strongly Agree
The activities were motivating	4.60	0.60	Strongly Agree
I enjoyed group work	4.55	0.63	Strongly Agree
Tasks helped me practice real language	4.70	0.50	Strongly Agree
I prefer this method over traditional instruction	4.65	0.58	Strongly Agree

Overall Gains

Analysis of the mean scores demonstrated that the experimental group achieved significant gains, ranging from 22 to 25 points, whereas the control group showed modest gains between 5 and 8 points. This considerable difference underscores the impact of task-based instruction in promoting more effective learning outcomes.

It suggests that the active engagement and authentic communicative tasks inherent in TBL facilitate meaningful language acquisition, providing learners with practical opportunities to apply and consolidate their skills.

1441 Speaking: The Most Improved Skill.

2019

Among the four skills, speaking exhibited the highest Modified Gain Ratio (MGR = 0.63), indicating the largest relative improvement. This outcome is consistent with the interactive focus of the TBL activities, which frequently require learners to participate in role-plays, group discussions, and problem-solving tasks. Such tasks inherently foster oral fluency, confidence, and communicative competence, reflecting the strength of TBL in

enhancing productive skills.

Listening, Reading, and Writing.

Listening, reading, and writing also demonstrated notable gains, with MGR values ranging from 0.58 to 0.61. These results reflect the integrated nature of TBL, which combines authentic input processing, comprehension exercises, and meaningful output production. The structured exposure to realistic materials and task-driven practice appears to have strengthened learners' abilities to understand, analyze, and produce language in context.

Comparison with the Control Group.

The control group's comparatively minimal gains indicated that traditional instructional approaches were less effective in fostering language development within the same period. This contrast highlights the limitations of conventional, teacher-centered methods in promoting active engagement and practical language use.

Pedagogical Implications.

The findings provided compelling evidence for incorporating TBL into the curriculum of non-specialist learners. Task-based instruction not only enhances skill acquisition but also promotes learner autonomy, motivation, and interaction, particularly in speaking and other productive skills. Therefore, TBL represents a pedagogically sound and empirically validated approach to improving English proficiency in applied academic and professional contexts.

The integration of statistical analysis and task-based instructional design confirms that Task-Based Learning significantly improves English proficiency among non-specialist learners. The study highlights that:

- Authentic, communicative tasks lead to measurable skill gains.
- Speaking skills benefit the most from interactive activities.
- Students exhibit positive attitudes toward learner-centered, task-oriented instruction.

These findings suggested that adopting TBL in English programs is a strategically effective approach for enhancing both language competence and learner motivation in non-specialized academic contexts.

Appendices.

Appendix A.

Pre-Test: English Language Skills (Business, Management, Economics, Accounting).

Section 1: Listening.

Task 1: Listen to a short business phone call and answer the following questions:

1. What product is being discussed?
2. What quantity does the customer request?
3. What delivery date is suggested?

Task 2: Listen to a manager giving instructions. Choose the correct answer (A/B/C).

Section 2: Speaking.

Task: Introduce yourself and talk for one minute about your field of study. Then describe a product or service you prefer and explain why.

Section 3: Reading.

Read the following email and answer the questions:

“Dear Student,

Please find attached the updated class schedule for the Business Administration department. Make sure to attend the orientation session next Monday.

Best regards.”

Questions:

1. What is attached?
2. When is the orientation session?

Section 4: Writing.

Write a short paragraph (80–100 words) about why English is important in your field (Business, Management, Economics, or Accounting).

Appendix B.

Post-Test: English Language Skills (Business, Management, Economics, Accounting)

Section 1: Listening

Task 1: Listen to a negotiation between a supplier and buyer. Fill in the missing details:

- Product: _____

- Agreed Price: _____

- Delivery Date: _____

Task 2: Listen to a short lecture on inflation and summarize the key points (3–4 sentences).

Section 2: Speaking.

Task: Explain a simple management problem (conflict between two employees) and suggest a solution. Speak for 1–2 minutes.

Section 3: Reading.

Read the text below and complete the tasks:

“Recent economic reports show an increase in inflation due to rising fuel prices. Businesses are adjusting their budgets to match the new market conditions.”

Tasks:

1. Identify the cause of inflation.
2. Explain one effect on businesses.
3. Provide one possible solution.

Section 4: Writing

Write a formal business email responding to this inquiry:

“Dear Administration,

I would like to know the updated exam schedule for the Economics course.

Thank you.”

Your reply should be 120–150 words.

Appendix C: Student Questionnaire

The purpose of this questionnaire is to assess students’ attitudes toward the Task-Based Learning (TBL) program. Specifically, it aims to measure learners’ perceptions of the effectiveness, relevance, and motivational impact of TBL activities on their language skill development.

The instrument evaluates students’ engagement, satisfaction, and preference for task-based instruction compared to traditional teaching methods, providing valuable insights into the pedagogical benefits and learner experiences associated with TBL implementation.

Item No.	Statement	Strongly Agree	Agree	Neutral	Dis-agree	Strongly Disagree
1	TBL activities helped me improve my speaking skills.	☐	☐	☐	☐	☐
2	I felt more motivated when participating in real-world tasks.	☐	☐	☐	☐	☐
3	Group work made it easier to understand the content.	☐	☐	☐	☐	☐
4	The tasks were relevant to my field of study.	☐	☐	☐	☐	☐
5	I prefer TBL activities over traditional lectures.	☐	☐	☐	☐	☐

Appendix D: Observation Checklist.

Used by the instructor during classroom tasks.

Criterion	Observed	Not Observed	Notes
.Student participation in group tasks	☐	☐	
.Use of target vocabulary	☐	☐	
.Ability to negotiate meaning	☐	☐	
.Engagement with task instructions	☐	☐	
.Collaboration with peers	☐	☐
